TK420: VoLTE Radio Features

Duration

3.0 Days

Course Content

1. LTE EPS Basics

1.1 Mobility Areas

1.2 LTE-UE Identifications

1.3 UE states

1.4 Bearers

1.5 QoS in LTE/EPS

1.6 EPS Procedures and Signaling

1.7 EPS Authentication and Key Argument

2. IMS basics

2.1 IMS generalities

2.2 IP-CAN

2.3 IMS Architecture

2.4 Call Session Control Functions

2.5 IMS Signaling Flows

2.6 LTE IP-CAN Flows

3. VoLTE radio features

3.1 UE capability and Voice Preference

3.2 Robust Header Compression

3.3 TTI bundling for VoLTE

3.4 VoLTE Scheduling

3.5 VoLTE DRX

3.6 VoLTE Admission Control

3.7 VoLTE Semi-Persistent Scheduling

4. VoLTE Mobility

4.1 Handover process

4.2 SRVCC and SRVCC dedicated thresholds

4.3 Service based mobility and Service based handover thresholds

4.4 SRVCC for network deployments not supporting PS_HO

4.5 RLF HO

4.6 QCI1 specific RLF and re-establishment control

4.7 Dedicated VoLTE inter-frequency target frequency list
